Subject Siltronic, EIB Source Control Work Plan

Good morning Kristine.

This morning you'll see an e-mail from me to James Peale regarding work being done to further delineate VOCs in the vicinity of the former solvent underground storage tank system (former UST system) at the Siltronic facility. Releases from the former UST system are the source of VOCs that have contaminated groundwater at the site.

The e-mail references a EIB Source Control Work Plan. I wanted to let you know that a copy of this document is on its way to you for your information and files.

Last Monday we discussed how I was routing documents, and I let you know then that I had been holding certain submittals pending their completion.

The EIB Source Control Work Plan is/was one of those I was holding. The work currently being conducted at the site will be used to prepare an addendum to the work plan. The addendum will complete the work plan by providing data regarding the nature and extent of VOCs (primarily TCE) in the former UST system vicinity, and based on this data, Siltronic's final recommendations for scaling up EIB.

As we agreed on the 21st, I will forward documents to you upon receipt, and as needed, I will follow-up with information regarding items needed to complete the submittal. The addendum to the EIB Source Control Work Plan will be sent your way upon receipt.

Hope your day is going well and please don't hesitate to contact me with questions regarding this e-mail,

the EIB Source Control Work Plan, or the status of the work being conducted in the area of the former UST system.

Mr. Dana Bayuk, Project Manager
Cleanup & Portland Harbor Section
